

Pitch Guide

The Simulation Pitch Guide is designed to support you in delivering a clear, structured, and persuasive presentation. It follows a **strict pitch structure**:

Introduction → Problem → Solution → Impact → Key Features & Benefits → Conclusion

to ensure your ideas are communicated logically and effectively.

Each section you are expected to:

- Capture attention from the very beginning
- Make the problem feel real and urgent
- Present your solution as a clear and valuable shift
- Highlight meaningful impact
- Link features to real benefits
- Conclude with a strong and motivating call to action

Simulation Pitch Evaluation Criteria

CRITERIA	DESCRIPTION
<i>PRESENTATION</i>	
CONTENT & COMPLETENESS	Follows the full pitch structure with clear, coherent, and complete content.
USE OF PERSUASIVE TECHNIQUES	Uses a well-organized structure and effective techniques to engage and influence the audience.
INNOVATION DEPTH	Demonstrates originality, creativity, and added value beyond basic ideas.
PERFORMANCE EVALUATION	Shows confident delivery, strong audience interaction, and effective communication during Q&A.
<i>COMMERCIAL VIDEO</i>	
HOOK & PROBLEM	Captures attention immediately and clearly presents the problem in an engaging way.
SOLUTION / VALUE PROPOSITION	Clearly presents a compelling solution using effective and engaging storytelling.
CALL TO ACTION & CLOSING	Ends with a strong, persuasive, and memorable call to action.

1. Introduction: Capture Attention

Open with a compelling hook that immediately engages the audience.

PITCHING Techniques:

- **Provocative question:** What if the problem we've learned to accept is actually solvable?
- **Striking statistic:** a powerful or surprising number to highlight the scale or urgency of the problem.
- **Immersive scenario:** place the audience inside a realistic situation or story.
- **Bold claim:** The way we address this issue today is outdated.

2. Problem — Define the Issue

Clearly show **who is affected**, **why it matters**, and the **consequences**.

PITCHING Techniques:

- **Emotional framing:** focus on the human, social, or economic impact of the problem.
- **Consequence amplification:** emphasize the negative outcomes and losses caused by the problem.
- **FOMO:** The problem will worsen without action.

3. Solution — Present the Shift

Introduce your solution as **a breakthrough**.

PITCHING Techniques:

- **Hero narrative (Before → After):**

Before: Describe the current struggle (inefficiency, confusion, risk).

Turning Point: Introduce your solution.

After: Show improvement (control, speed, safety, ease).

- **Value-driven language:** focus on outcomes and benefits, not technical details.
 - Show what users gain, not how the system works.
- **Differentiation:** highlight what makes your solution unique and better than alternatives.

4. Impact — Highlight Outcomes

Show long-term **value and transformation**.

PITCHING Techniques:

- **Future projection:** help the audience visualize the future after adopting your solution.
- **Scalability:** show that your solution can grow and expand.
- **Strategic FOMO:** emphasize the cost of not adopting the solution.

5. Key Features & Benefits — Prove Value

Link each feature to a benefit.

PITCHING Techniques:

- **Benefit-first framing:** Start with the result, then support it with the feature.
- **Quantification:** Use numbers to make your claims more concrete and credible.
- **Outcome emphasis:** Focus on the result or improvement, not the feature itself.

6. Conclusion — Trigger Action

End with a **strong and memorable message**.

PITCHING Techniques:

- **Call to Action:** Directly invite the audience to act.
- **Challenge:** Encourage the audience to rethink current practices.
- **Vision statement:** Present a positive and inspiring future.
- **FOMO closing:** Highlight the risk of missing the opportunity.
